Amir Abbas Khalili

Master's Student in Smart Building Engineering | Civil Engineering

Amirkhalili.work@gmail.com | LinkedIn: amirjas | Website: amirabbas-khalili.github.io

RESEARCH INTERESTS

Three-dimensional lattice metamaterials; vibration reduction and wave propagation; energy absorption; finite element modeling; deep learning for engineering design; sustainable cementitious materials.

EDUCATION

Master's in Smart Building Engineering (ongoing)
Tarbiat Modares University, Tehran | GPA: 17.96/20 | Class rank: 2 of 12

5th in Iran for Engineering - EduRank 2026

Bachelor's in Civil Engineering
Amirkabir University of Technology | GPA: 15.76/20 | Class rank: 12 of 102

2nd in Iran for Engineering - EduRank 2026

MASTER'S THESIS

Design and Optimization of Three-Dimensional Lattice Structures for Vibration Reduction and Energy Absorption Using Deep Learning

Investigates how cubic lattice geometry influences frequency band gaps and mechanical behavior under compression. The workflow integrates numerical simulation, data analysis, deep learning and experimental validation.

Methods: Python generates graph-based face geometries and complete hollow cubic cells. COMSOL eigenfrequency analysis evaluates band-gap behavior; Abaqus compression simulations provide force-displacement responses for energy absorption, deformation, failure and densification studies.

Data-driven design: Graph neural networks investigate relationships between lattice geometry and band-gap behavior to support geometry recommendations and optimization. Vibration and compression tests on 3D-printed specimens were used to validate numerical models.

RESEARCH EXPERIENCE

Research Assistant | Tarbiat Modares University
July 23 - September 23, 2026 | Supervisor: Dr. Morteza Karamooz Mahdiabadi, Assistant Professor of Mechanical Engineering.

Contributed to computational mechanics, numerical modeling and wave propagation in 3D structures, including plasticity and failure modeling in Abaqus/Explicit. Developed step-by-step instructional materials and video tutorials for COMSOL Multiphysics and Abaqus.

Research Collaboration | Advanced Cementitious Materials
Self-Healing Concrete: Fibre Reinforcement, Recycled Materials, and Machine Learning - collaborative review in progress.

Reviewing relevant studies, conducting supporting research and evaluating reinforcement materials, particularly recycled fibres. Topics include geopolymer and alkali-activated materials, mechanical performance, crack control, durability, sustainability and machine learning for material design.

CONFERENCE PAPERS

Design and Analysis of a Novel Three-Dimensional Cubic Cellular Metamaterial for Vibration Reduction
Amir Abbas Khalili, Niloofar Rezaeineya and Morteza Karamouz.
15th International Conference on Acoustics and Vibrations, 2025. Accepted and presented in person; paper ID: 1134-ISAV2025. View paper.

Finite element investigation of two cubic cellular metamaterials, comparing dynamic responses and frequency band gaps with related structures.

Modern Methods in Road Pavement and Asphalt
Amir Abbas Khalili, Ali Khodaii and Reza Amin.
8th Annual International Congress on Civil Engineering, Architecture and Urban Development, 2022. Accepted and presented as a poster. View paper.

Review of pavement construction techniques, hot and cold recycling, and materials and additives, with emphasis on performance, environmental protection and resource conservation.

TECHNICAL EXPERTISE

Engineering methods: Finite element analysis; engineering modeling and simulation; structural design and analysis; geometric optimization; 3D printing and additive manufacturing.

Software: COMSOL Multiphysics, SIMULIA Abaqus, AutoCAD, Revit, ETABS, Civil 3D and EPANET.

Programming and data: Python engineering tool development; data processing and analysis; machine learning and deep learning; SQL; Git and GitHub; Kaggle datasets and project notebooks. View code and projects.

Research and productivity: Technical research and documentation; teaching and knowledge sharing; AI-assisted research workflows; ICDL and Power BI.

TEACHING & RESEARCH COMMUNICATION

Published engineering tutorials | October 4, 2026
Step-by-step educational videos: Dispersion Curve (COMSOL wave-vector paths and band gaps); Transmission Spectrum (COMSOL transmission analysis); Energy Absorption (Abaqus compression and energy-absorption curves).

English teaching: Private language institute instruction. Teacher Training Course (TTC), 2024: grade of Excellent; qualified to teach at English language institutes.

ACADEMIC ACTIVITIES & RECOGNITION

Smart Buildings Engineering Scientific Association: Secretary and active member for two years; organized academic meetings and related events, including a seminar on lightweight aggregates and lightweight concrete at Tarbiat Modares University on December 24, 2025.

Third place, first Future Building Competition: National Competition of Designing and Building a Smart School, Architecture category; organized by the Vice Presidency for Science, Technology, and the Knowledge-Based Economy.

ENGLISH PROFICIENCY

TOEFL: 99/120
Reading: 28 | Listening: 28 | Speaking: 20 | Writing: 23
